

Box Stock Spec 375

15 years & up, #375, MCS/Yellow and MDH/Blue (using the 9.50/blue) Vega tires - new or used (not part of 2022 tire rule). No scanning.

196 Clone Engine having 2 "Gold" seals as per intended by "Box Stock Project". This package uses the small pipe w/RLV silencer. Clutch will be dry shoe type only, as manufactured. Any gear and any RR tire size, there are too many different driving styles and track changes to be controlling these 2 items.

No Vega Expert drivers allowed. As this class gains popularity, we will consider adding more classes of this type.

Primary goal of this class is to provide an amateur environment as a stepping stone to other classes in the near future. This engine can be unsealed at a later date when the racer wishes to move up to other existing non-sealed classes. Engines can be purchased from Box Stock Project or your local kart dealer, you will just need to ask for the "Gold" sealed Spec engine. Engine package kits will be available trackside but calling ahead is recommended. Retail cost less clutch and mount is \$275.00. Orders are being taken for first of the year delivery and shipments from "Box Stock Project".

The Vega Series will be monitoring seals and engine serial numbers. Box Stock Project has endorsed the Vega Series and will provide support along the way to continue to improve the program.

The Vega Series reserves the right to place an engine claiming rule as this class develops but not now!

Update: 5/16/22
